

1. 🧠 MICRO-SKILL SYSTEM (WHY YOU DIDN'T STAND OUT)

You said:

you didn't stand out on freshman team

That's not skill. That's **application under conditions**.

So now you train this:

⚡ "Game Transfer Training"

Every skill session must include:

- **Decision-based reps**
 - Not just shooting → shooting with a move before
- **Constraint training**
 - Only 2 dribbles
 - Weak hand only
- **Fatigue reps**
 - Shoot when tired

👉 This is what makes skills show up in games.

2. ⚙️ MOVEMENT QUALITY SYSTEM (THIS IS ELITE LEVEL)

Most athletes train:

- muscles

Elite athletes train:

- **movement patterns**

Add this DAILY (5–10 min)

- Barefoot balance (1 leg, eyes closed)
- Slow controlled lunges (perfect form)
- Crawling (yes — seriously)
- Slow squats focusing on control

👉 This fixes:

- random pains
- coordination
- body control

3. FOOT DOMINANCE SYSTEM (SUPER UNDERRATED)

You mentioned weird exercises — this is one of the BEST.

Do this 4–5x/week (5–10 min):

- Toe raises (lift toes only)
- Towel scrunches

- Single-leg balance barefoot
- Walk on toes (forward + backward)

👉 This directly improves:

- speed
 - balance
 - explosiveness
 - injury resistance
-

4. ⚡ NERVOUS SYSTEM TRAINING (THIS IS WHY SOME KIDS LOOK “FAST”)

It's not just strength — it's how fast your body fires.

Add 2–3x/week BEFORE workouts:

- 3–5 sprints (10–20 meters)
- Reaction drills (drop ball, react fast)
- Quick pogo jumps

👉 Keep it SHORT and explosive

This trains:

- quickness
- reaction time
- explosiveness

5. 🧬 LOAD MANAGEMENT SYSTEM (THIS SAVES YOU)

This is where you almost messed up before (stress fracture).

Rule system:

If you have:

- Hard soccer day
- AND legs
- AND plyos

✗ That's TOO MUCH

Instead:

Balance like this:

- Hard day → next day = medium or light
- Never stack 3 leg-heavy things

👉 This is how pros stay healthy

6. 🧠 CONFIDENCE SYSTEM (THIS IS REAL)

You already know:

you play better with better players

Now we weaponize it.

Before playing:

- Visualize 3 successful plays
- Tell yourself: *"I belong at this level"*

During play:

- Focus on effort + decisions, NOT mistakes

👉 Confidence = preparation + repetition

7. 🍴 SIMPLE NUTRITION STRUCTURE (NO BS)

You don't need crazy diets.

Just follow this:

Every meal:

- Protein (chicken, eggs, etc.)
- Carbs (rice, bread, fruit)
- Water

After workouts:

- Protein + carbs ASAP
-

For fat loss:

- Don't snack randomly
 - Don't drink calories
 - Stay active (you already are)
-

8. RECOVERY UPGRADE (NEXT LEVEL)

Add 2–3 of these consistently:

- Legs up wall (5–10 min)
- Nasal breathing (slow breathing)
- Light stretching before bed
- Walks (low intensity recovery)

👉 This helps your body ACTUALLY recover

9. PROGRESSION SYSTEM (THIS IS HUGE)

You don't just “train” — you **progress**

Every week aim for:

- +1 rep
- OR slightly more weight

- OR better control

For skills:

- Faster execution
 - Cleaner movement
 - More consistency
-

10. WHAT YOU NEED TO STOP DOING

This is just as important.

Stop:

- Doing random exercises with no structure
 - Training hard EVERY day
 - Comparing yourself to low-level players
 - Chasing “feeling tired” instead of improvement
-

FINAL TRUTH (THIS IS IT)

At this point, you have:

- Structure 
- System 
- Advanced layers 

- Mental edge 

Now everything comes down to ONE thing:

Execution over time
